

FLEXITEEK

DECKING REDEFINED

INTRODUCING FLEXITEEK 3

BEAUTIFULLY ENGINEERED SYNTHETIC DECKING

Now in our third decade, Flexiteek is trusted by over 200 of the world's leading boat builders. Our patent pending, third generation of Flexiteek looks every bit as beautiful as traditional teak.

Designed to be safe and comfortable in extreme conditions, it will last for many years with minimal maintenance. It is 100% recyclable and our first generation of Flexiteek produced with bio-attributed PVC.

BEAUTIFULLY ENGINEERED

Available in five colours, with a further six colours available, Flexiteek can be customised with lettering, logos and designs to personalise your new deck.

Thanks to our extensive global distributor network, we can easily fit it to your boat, regardless of its size.

By harnessing developments in technology, like using more sustainable raw materials, Flexiteek 3 sets a new standard in beautifully engineered synthetic decking.

GRAINING IN HIGH DEFINITION

With its exquisite grain detail, our latest generation of Flexiteek has been crafted to look just like real teak, but without the environmental dilemmas associated with tropical hardwoods.

FLEXITEEK 3 COLOUR RANGE

Flexiteek 3 is available in four colours, that mimic the tones of teak, from new to a more weathered appearance.

Ash is a NEW third generation colour, providing a fresh and vibrant option for your deck.

Each colour is available in three caulking colours, classic black, contemporary grey and modern white.

Teak

Scrubbed

Bleached

Weathered

Ash

DARK WOOD COLOURS

Our three dark wood colours are available in up to three different caulking colours.

Vintage

Charcoal

Walnut

MONOCHROME COLOURS

The modern tones of our three monochrome colours provide a strikingly different look for your boat. Available in up to two caulking colours.

Carbon

Grey

Off-White

HIGH-PERFORMANCE

Flexiteek 3 requires little maintenance to keep its great looks. No need for regular hard scrubbing or expensive cleaning and sealing systems; just the occasional rinse or jet wash for a deep clean that will leave it looking like new.

LONG LASTING

Your new deck comes with a 5-year guarantee against material defects. All Flexiteek decks are manufactured using vinyl welding techniques making the joints stronger than just using glue. The surface is extremely hard-wearing, UV stable and is completely re-sandable should you ever need to.

ENGINEERED RESPONSIBLY

Our decking is produced with a bio-attributed PVC (a renewable material) ensuring Flexiteek 3 produces up to 80% less greenhouse gases compared to fossil-based PVC. We use a REACH-compliant phthalate-free plasticiser with low migratory performance.

COOLER QUICKER

Flexiteek has been engineered to cool up to 30% faster than alternative decking products, helping to minimise the feeling underfoot in warmer locations around the world.

REDUCED WEIGHT

Our 5mm profile weighs just 4.5kg per m². Flexiteek 3 is up to 35% lighter than rival synthetic decking systems. This makes it particularly attractive for high-performance multihulls, power and sailing boats.
